eMailTrackerPro Advanced Edition includes an online mail checker which allows you to view all your emails on the server before delivery to your computer. This is an excellent safety feature as it stops high risk and suspicious emails from reaching and infecting your computer. Using this feature scans every email waiting for delivery and quickly identifies where they originated from and if they are misdirected (a common tactic used by abusers to make you think the email is from somewhere else). This saves you time and effort as it allows you to quickly identify and remove SPAM and infected emails safely before they can do any harm.
